

## Laboratory Confirmation Kits

Everything you need for an efficient back to lab service

Screening with SureScreen's high quality rapid drug tests allows you to eliminate the negative samples quickly and efficiently, so you can concentrate on any positive (non-negative) samples you find. Any positive results should then be analysed using laboratory methods such as GC/MS or LC/MS to confirm the specific drug detected and give the quantity recorded.

Our UKAS accredited laboratory analysis is incredibly sensitive, capable of measuring parts per billion or even parts per trillion, equivalent to detecting the presence of a drop of water in the volume of a domestic swimming pool.

Our confirmation kits make this whole process easy, and include tamper evident resources to ensure the legal validity of samples and all the forms you require in triplicate NCR so you don't have to fill in the same details more than once.

We deliver an efficient, cost effective, professional and discrete service.

### Turnaround Times

Urine Confirmation Kit (Normal Service)	5-7 Days
Urine Confirmation Kit (Fast Track Option)	3-5 Days
Oral Confirmation Kit	5-7 Days
Hair Analysis Kit	7 Working Days

Our confirmation kit fully conforms with sample transit guidelines UN3373 for category B Biological Substances.
